

Seed List No. 61

2012/2013

WELCOME TO THE ALPINE GARDEN SOCIETY'S 61st SEED LIST

Please read through these notes and also the notes on the back of the order forms before completing the forms. The main distribution will begin in December and will continue into the New Year. Please note that the distribution takes place from Pershore and the office will be closed for the Christmas and New Year holiday. Consequently, no orders will be made up between 21 December and 7 January 2013

The seeds offered originate from various sources and cannot be guaranteed true to name. Neither The Alpine Garden Society nor any official of the Society can be held responsible for what is supplied. Members are reminded that named cultivars and hybrids cannot be relied upon to come true, and plants raised from seed from cultivars **should not be labelled with the names of those cultivars.**

Seeds of many species are in short supply and we can never have enough to meet all requests. If you request very rare or scarce species you may be disappointed and we advise you to spread your requests throughout a variety of seeds on the list. We do limit the allocation of rare and sought after species to try and be as fair as possible to all members, especially those members who donate the rare seed.

Surplus seeds are those remaining after all applications for main distribution seeds have been met. Please see the notes on the back of the order form for further information.

On-line ordering is becoming the most popular way to order seed. There are many advantages in ordering this way, in particular a built in link to pictures of the plants on the list. You can make your selection, then come back later and narrow it down or change your choices. Ordering and paying is easy on line and it is very helpful for the team making up orders. We will take care to ensure parity between on line ordering and postal ordering so neither system will get priority. Please go to <http://www.alpinegardensociety.net/seed/exchange/> and follow the instructions on the page.

Easy packs: We often get requests for seeds which are easy to germinate and grow, so this year we have introduced several "Easy Packs". These packs contain a number of specially chosen varieties of seed, which are suitable for beginners or those people wanting quick results. The packs will also contain information on the plants included, and an instruction sheet on how to germinate and grow these varieties. Please select the code letter(s) of the pack(s) of your choice in the box on the order form. You may request any number of packs within your allocation. They will also be available in the Surplus Seed Distribution, subject to availability. All packs contain seeds which are easy to germinate and grow, in a variety of colours. None of the plants in these packs need Alpine House cultivation.

Overseas Members: We remind those members outside the UK and the EU that most countries restrict the import of some species. It is the responsibility of members from overseas to check the laws covering seed importation before ordering to make sure that anything they request is not on their country's list of banned imports. Failure to do this could cause confiscation and destruction of all the seed within the imported packet at the point of entry to your country. Overseas members should pre-check the list of approved species by contacting their local Ministry of Agriculture. We will do what we can to fulfil your requirements. For orders from the US, Australian and New Zealand we will include a printed list of your seeds to meet your countries' requirements, and we will do what we can to ensure we do not send banned species.

Guidance on restricted species may be found on the following sites:

New Zealand: <http://www1.maf.govt.nz/cgi-bin/bioindex/bioindex.pl>

USA: <http://www.nargs.org/>

USDA regulations do not permit the importation into the USA of any parasitic species, any species of the genus *Lathyrus* (without treatment) nor any member of the families Berberidaceae and Rutaceae.

Wild Collected Seed is donor coded to enable us to identify individual collection sites. The initials after the plant name refer to the donor, please refer to the donor pages at the back of the booklet for codes. A species with 2 or more donors is indicated by >2. Details of some of the collection sites may be available on request from: Diane Clement, e-mail: diane.clement@agsgroups.org

Easy Packs

These packs can be chosen on their own, or in addition to your normal seed order. Please enter the letter of the pack of your choice in the box on the order form. You may request any number of packs within your allocation. They may also be available in the Surplus Seed Distribution, subject to availability. The packs contain information about the plants, and germination and cultivation instructions. All packs contain seeds which are easy to germinate and grow, in a variety of colours. None of these plants need Alpine House cultivation.

Pack A 10 different packets of seeds suitable for a rockery, raised bed or trough.

Pack B 20 different packets of seeds suitable for a rockery, raised bed or trough.

Pack C 10 different packets of seeds suitable for a herbaceous border.

Pack D 20 different packets of seeds suitable for a herbaceous border.

Pack E 10 different packets of seeds of bulbous plants . If you have never grown bulbs from seed before, this is the place to start.

Plant Names in the Seed List

This is the eleventh seed list I have produced for the AGS seed exchange, and over those years there have been many changes in plant names.

The printed Floras I used in the past for name checking have gradually become outdated by websites which are able to be updated more frequently. Many of the plant reference websites are excellent, containing comprehensive and accurate information. The main references I use are:

The RHS Horticultural Database (includes The Plant Finder):

The Plant List <http://www.theplantlist.org/>

The Kew Checklist of Selected Plant Families <http://apps.kew.org/wcsp/>

There have been many name changes over the years and I know that these changes are a frustration to many growers. There are several reasons for name changes. The new name may be actually a previously published name which has precedence over the old one, sometimes two species have been merged or sometimes a subspecies has been given specific status. Some of the more significant changes are due to the work of the Angiosperm Phylogeny Group, or APG, which is a group of taxonomists working on a new system of flowering plants that reflects recent knowledge about their relationships. The most recent version was published in 2009 as APG III. APG looks into relationships between plants by considering their molecular characteristics and not just morphological characteristics which have previously been among the main ways in which we have established relationships between groups of plants.

Significant family changes have recently taken place, e.g. Alliaceae and Hyacinthaceae have disappeared, and others such as Scrophulariaceae have undergone radical changes. However, as far as the seed list is concerned, family changes do not affect the name we call the plant, but genus changes do, and I have continued to make changes to the names we publish on the seed list at genus and specific level. I understand that some new genera may take a while to be recognised so I am making the changes gradually. That in itself may draw some criticism as it may be felt that there are inconsistencies in the list, but it has been done in the best interests of the membership. Overleaf, I have listed **some** of the changes to the names most frequently occurring in the list and some older changes as reminders. These are marked with an asterisk (*) in the Seed List for quick reference.

Name changes (some are marked with an * in the Seed List for easy reference)

Old name	New name
<i>Anomatheca</i> (all)	<i>Freesia</i>
<i>Belamcanda chinensis</i>	<i>Iris domestica</i>
<i>Bellevalia forniculata</i>	<i>Pseudomuscari forniculatum</i>
